CASE 7.5 Breast Augmentation with Brava, AFT, and RAFT

Figure 7.15 (A,B,C) A 30-year-old Asian woman with minimal amounts of available fat and a tight breast envelope. After Brava expansion, we plan to recruit the crescent of epigastric tissue to supplement a conventional Brava + AFT with a RAFT. Initial lateral view after 150 mL of AFT alone (D,E,F). Additional 150 mL of recruited tissue provided by the RAFT purse string tied and suspended to the pectoralis (G,H,I,J). At the 6-month follow-up showing the final augmentation from Brava + AFT + RAFT (K,L,M).
