

7.4 Special considerations and sequencing in 2-jaw osteotomies

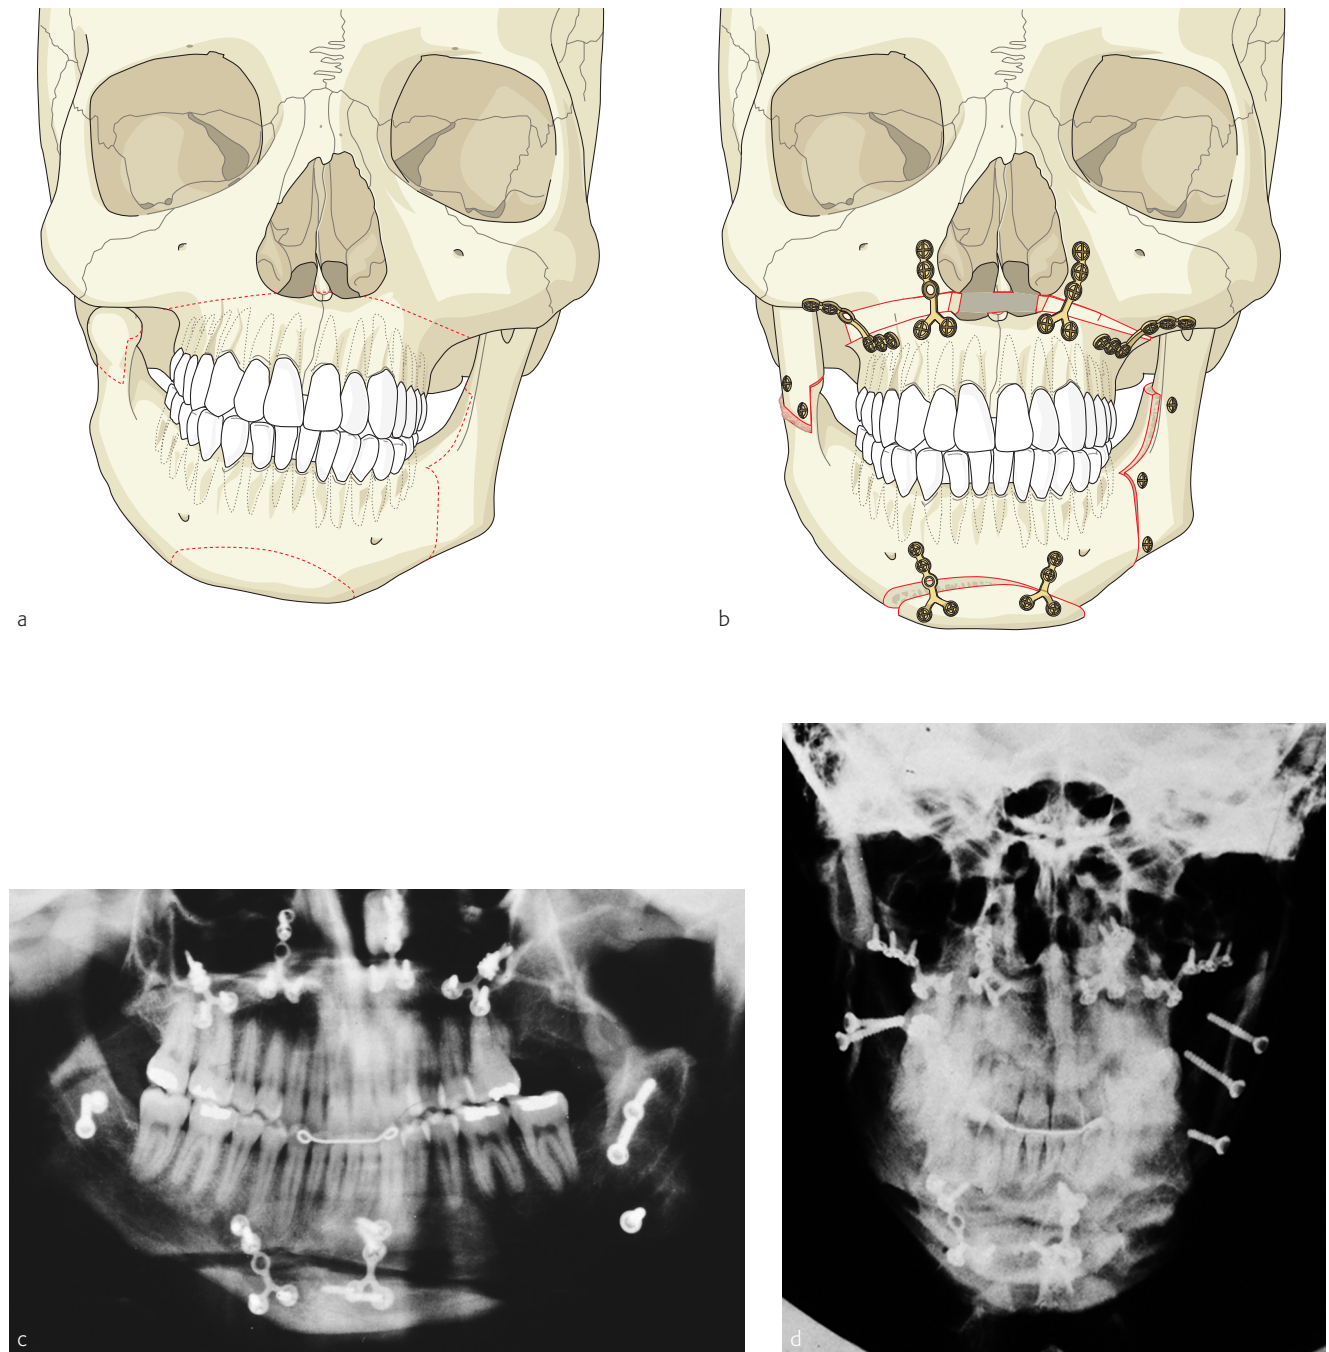

Fig 7.4-1a-d

- a** Facial asymmetry with deviation of the occlusal plane due to shortness of the mandibular ramus and reduced maxillary height on the right side.
- b** The correction consists of a Le Fort I osteotomy, a sagittal split osteotomy on the left, a step-like osteotomy on the right, the transplantation of a costochondral graft, and a chin osteotomy. All osseous gaps are filled with bone grafts.
- c-d** Orthopantomogram and posterior anterior view of the described correction.
